

## Manufacturing Capabilities: 2 Truss Plants

The Building Center employs design, engineering, and construction personnel in two truss plants in North Carolina.

With the addition of the Mitek cyber saw in Mebane, both truss plants are currently working with state-of-the-art production equipment. The cyber saws provide faster set-ups, extremely accurate measurement and resolution, efficient processing, and stable calibration throughout the run.

Automated jig tables set pegs via computer for easier setup and guaranteed accuracy to plan.

“We compete with each other a bit,” said Todd Cooper, General Manager in Mebane. “Russ and I like to compare notes and see who’s making it work the best.”

“Another big improvement,” said Russ Woodworth, GM in Gastonia, “is the installation of Mitek Sapphire Software. This allows us to streamline our communications between designers, engineers, the EWP guys, and so on. That means better lead times and better information for our customers.”

*Our mission is to be your most valued building partner, building the homes we live in today.*
